Introduction

There are more species of shrimps, lobsters, and crabs in the marine waters of the state of Florida than in any other region of the continental United States. This great diversity is the result of three factors: (1) Florida's coastline is extensive; (2) a tremendous number of marine habitats occurs in Florida; and (3) two biogeographic regions come together in Florida, the northern *Carolinian* and the southern *Caribbean* (or *West Indian*). The total number of decapods in the marine

shallow waters of Florida is probably close to 900 (see Methods and Materials).

The literature on Florida's decapods is scattered and incomplete and often lacks keys or illustrations. The present contribution is an attempt to remedy this situation. We have compiled a checklist, keys, and illustrations of all marine, shallow-water (≤ 300 m) decapod crustaceans known to occur in Florida, a total of 724 species.

Brief Review of the Literature

Published work on the decapod crustaceans occurring in Florida dates from the earliest explorations by Europeans in the Caribbean and western Atlantic. Many of these contained brief descriptions and even some illustrations (e. g., Sloane, 1725), which were given nomenclatural status by Linnaeus (1758). Many of the species described by Gibbes (1850), Stimpson (1860, 1871), and Kingsley (1878) occurred in the marine waters of Florida. Professor H. E. Webster collected along the gulf coast of Florida, and these collections were published on by Kingsley (1879). Additional Florida collections were reported on by Ives (1891). The *Blake* expeditions included Florida material, which was published by A. Milne Edwards and Bouvier (1893, 1897, 1902, 1909, 1923).

Modern published work dealing explicitly with Florida marine decapods is scattered. Chace (1942a) described five new species of decapods from the west coast of Florida. Wass (1955) published an annotated list of the decapods of northwestern Florida and described three new species. Provenzano (1959) reviewed the hermit crabs of Florida and described one new species. Hulings (1961) added several new records from deeper water in the northeastern gulf. Wells and Wells (1961) described a new species of crab from the northern gulf, as did Salmon and Atsaides (1968) and Novak and Salmon (1974). Although not dealing specifically

with Florida, William's (1965a) excellent volume on the decapods of the Carolinas contains a tremendous amount of information relevant to the Florida fauna. The 1984 revision of this work (Williams, 1984) extended the coverage to include the northeastern Atlantic coast of Florida.

Beginning in the 1970's, there was a virtual explosion of information on Florida decapods. Biffar (1971a, 1971b) reviewed the callianassids of Florida. Abele (1971, 1972a, 1972b, 1972c, 1973) reviewed the status of some palaemonids, xanthids, atyids, and grapsids in Florida. McLaughlin and Provenzano (1974a, 1974b), and McLaughlin and co-workers (McLaughlin, 1981a, 1981b, 1982; García-Gómez, 1982; Lemaitre, 1982; Lemaitre et al., 1982) provided extensive information on the hermit crabs of Florida. Beginning in 1973, Robert H. Gore published a series of papers on the decapods of the Indian River region of Florida, including a major work on parthenopid crabs (e. g., Hendrix and Gore, 1973; Gore 1977, 1979, 1981; Gore and Wilson, 1978; Gore and Scotto, 1979; Kensley and Gore, 1981). Mayo (1973) reviewed the genus *Cancellus* including Florida material. Additional data on Florida decapods can be found in Rouse (1970) and in the results of the *Hourglass* cruises (e. g., Lyons, 1970; Cobb, 1971, 1973; Cobb et al., 1973).

Methods and Materials

The checklist is derived from several sources. First, it is based on a search of the literature, and we have cited these sources in the text. Additions were made based on our own collections, those of Dr. Patsy McLaughlin, and those housed in the following institutions: the Smithsonian Institution's National Museum of Natural History (SI-NMNH); the State of Florida's Department of Natural Resources Collections in St. Petersburg, Florida; and the collections of Harbor Branch Foundation's Indian River Coastal Zone Museum in Fort Pierce, Florida.

Keys were prepared from the literature sources cited in the headings of the keys and verified by us in so far as was possible.

This volume is intended as an identification guide, and we wished to provide a standard format for the illustrations. The illustrations were therefore re-drawn from the sources

cited. We were able to locate source illustrations for 722 of the 724 species, although they varied in quality. We were unable to locate specimens or illustrations of the majid crab *Collodes nudus* and the goneplacid crab *Pilumnoplax elata*. We urge our readers to verify their identifications using the primary literature. The scaling is in a standard format: a single line indicates that the scale is in millimeters, and a double line indicates centimeters; the number of units is indicated by the number of tick marks shown on the scale.

We made every effort to indicate all species known from Florida's marine waters. The checklist, however, is not complete for three reasons: (1) we were working on a time schedule and could not search indefinitely; (2) there are numerous undescribed species that are either currently being studied or in museums, and we did not believe it appropriate to include these; and (3) we are sure that we simply missed some species.

Classification and Arrangement of Taxa and Illustrations

We have generally followed the classification given in Bowman and Abele (1982) and the arrangement in Abele and Felgenhauer (1982). Within families we have arranged the genera (and species within genera) alphabetically. The illustrations are grouped by family and follow the key to that family. They are grouped by genera and within genera by the sequence that they occur in the key with the

following exception: Genera containing a single species are grouped together at the end of the family. This was done simply to save space.

Taxonomic nomenclature follows the most recent revision available unless general usage dictates otherwise. This is an identification guide not a revision.

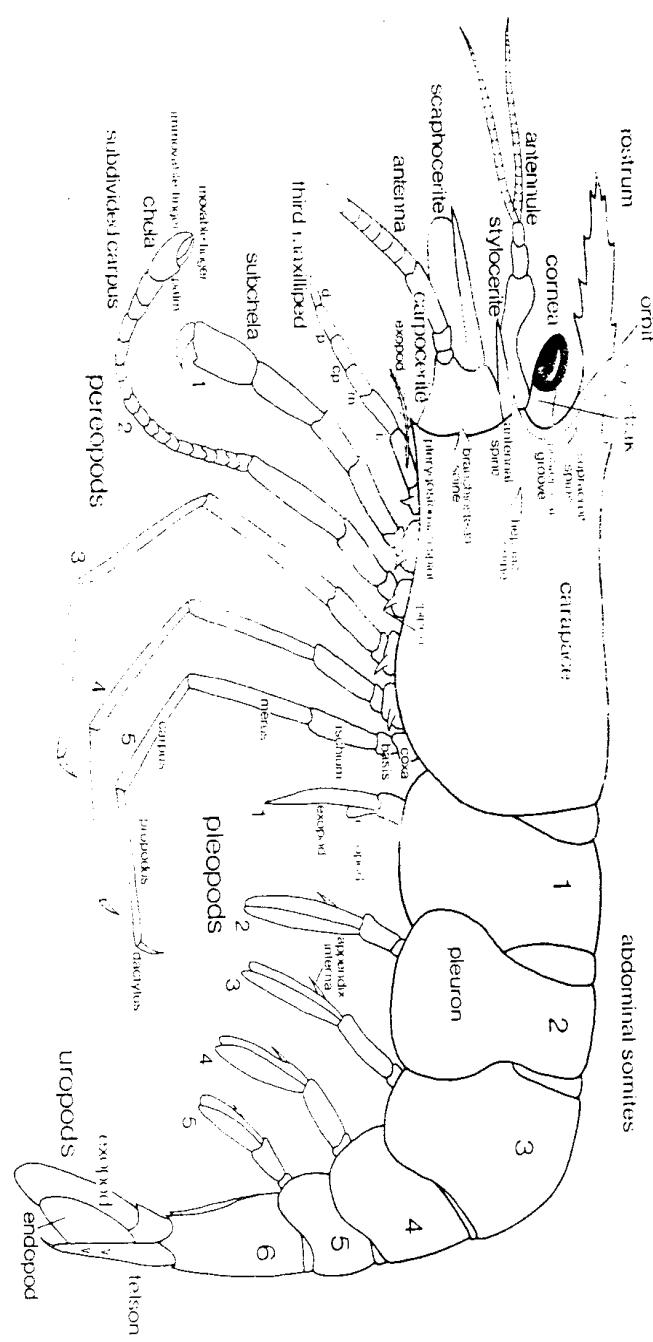

Acknowledgements

We owe a great debt to the many authors whose work is cited in this volume. We thank the following individuals for their comments: David Camp, Fenner A. Chace, Jr., Michael Dardeau, Isabel Pérez Farfante, Darryl Felder, Bruce Felgenhauer, Brian Kensley, Patsy McLaughlin, Raymond Manning, Jody Martin, Paula Mikkelsen, and Austin Williams. A special word of thanks is due David Camp, Patsy McLaughlin, and Paula Mikkelsen for comparing our checklist with collections under their care as well as for providing detailed information on species and keys. All errors are our own.

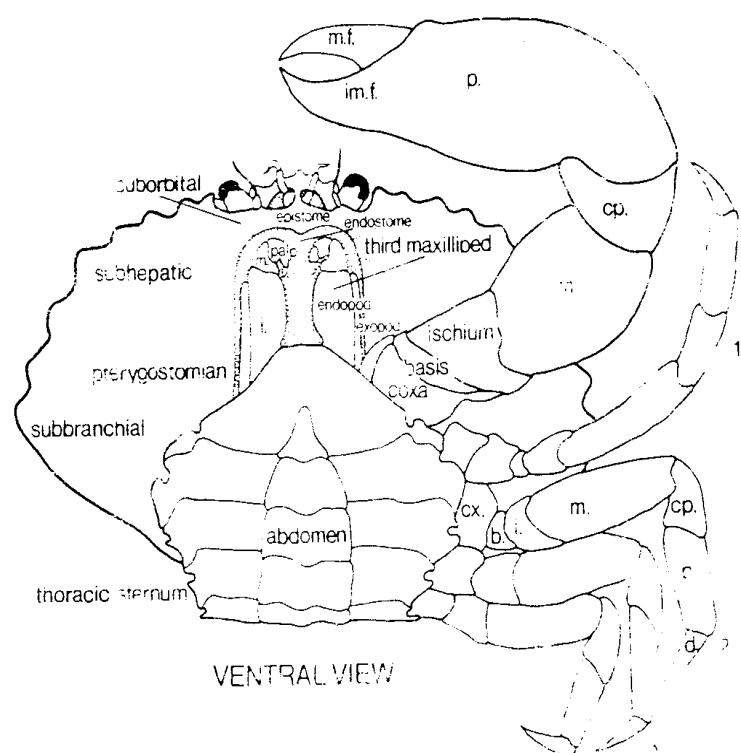

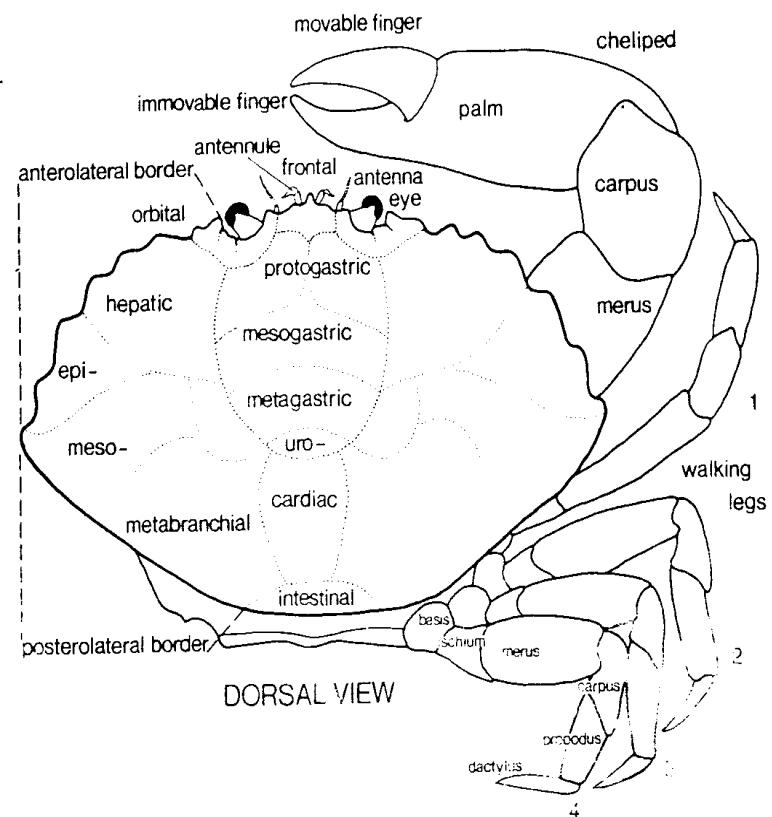

A special thanks also to Landon Ross of the Florida Department of Environmental Regulation for efforts above and beyond the

call of duty in assisting with the completion of this project. Similar thanks to Steve Wolfe for the extensive work involved in the production of this volume.

We thank Lisa Velez for her help in library research and for entering thousands of references into our computerized literature system. Anne Thistle typed the keys and legends, patiently revising them numerous times. This work was supported, in part, by the Department of Environmental Regulation, State of Florida, through a contract administered by the Florida Institute of Government. Partial support was provided by the National Science Foundation grant no. BSR 85-08430.

Checklist of the Decapod Crustaceans of Florida

SUBORDER DENDROBRANCHIATA

FAMILY ARISTEIDAE

Aristaeomorpha foliacea (Risso, 1827)
 Description: Zariquey Alvarez, 1968:42, figs. 22a, b, 24a.--Holthuis, 1980b:8.
 Type-locality: Vicinity of Nice.
 Distribution: Eastern Atlantic: Bay of Biscay to NW Africa and the entire Mediterranean. Western Atlantic: South of Massachusetts to the Straits of Florida, Gulf of Mexico, Caribbean Sea and off Venezuela. Indo-West Pacific: East Africa to Japan, Australia, New Zealand and Fiji (Holthuis, 1980b).

Plesiopenaeus edwardsianus (Johnson, 1867)
 Description: Crosnier and Forest, 1973:292, figs. 98, 99a, b.--Holthuis, 1980b:11.
 Type-locality: Madeira
 Distribution: Eastern Atlantic: Portugal to South Africa; (not in the Mediterranean). Western Atlantic: Grand Bank (43°42'N) to Gulf of Mexico, Caribbean Sea and north coast of South America (Holthuis, 1980b). Indo-West Pacific: off east Africa to Japan, Australia.

FAMILY BENTHESICYMIDAE

Bentheogenennema intermedia (Bate, 1888)
 Description: Bate, 1888:343, pl. 58: fig. 3.--Roberts and Pequegnat, 1970:39.
 Type-locality: Off Siera Leone, 01°47'N, 24°26'W; 3386 m; *Challenger* station 106.
 Distribution: Appears to be distributed worldwide; probably pelagic (Roberts and Pequegnat, 1970); Florida (personal communication, P. M. Mikkelsen).

FAMILY PENAEIDAE

Funchalia villosa (Bouvier, 1905)
 Description: Burkenroad, 1936:129
 Type-locality: Between Canary Islands and Azores.
 Distribution: Adults are known from the eastern and western North Atlantic, Mediterranean, the south central South Atlantic, and the Caribbean; larvae known from the western North Atlantic and South Pacific. Florida (personal communication, D. K. Camp, P. M. Mikkelsen).

Metapenaeopsis gerardoi Pérez Farfante, 1971

Description: Pérez Farfante, 1971:20, figs. 11, 12, 13c.
 Type-locality: Off Mayaguez, Puerto Rico, 18°8.5'N, 67°23'W.
 Distribution: Bahamas, Florida Keys, West Indies, and Caribbean coast of Central and South America (Pérez Farfante, 1971).

Metapenaeopsis goodei (Smith, 1885)

Description: Pérez Farfante, 1971:9, figs. 4-8.--Williams, 1984:36, 37, figs. 17-18.
 Type-locality: Bermudas.
 Distribution: Bermuda; between Capes Hatteras and Lookout, North Carolina, through Florida Straits and along west Florida to Pensacola; Isla de Lobos reef, Veracruz (Ray, 1974), around Yucatan Peninsula, through Caribbean Sea, and along South American coast to Espírito Santo, Brazil (Coelho and Ramos, 1972; Williams, 1984).

Metapenaeopsis smithi (Schmitt, 1924)

Description: Schmitt, 1924a:62, figs. 1b, c, 2a, c.--Pérez Farfante, 1971: 29, figs. 13E, 18-22.
 Type-locality: Caracas Baai, Curaçao.
 Distribution: Bermudas and southeastern Florida to Curaçao, mostly near islands; western Caribbean; Lesser Antilles (Chace, 1972).

Parapenaeus americanus (Rathbun, 1901)

Description: A. Milne Edwards and Bouvier, 1909:231.
 Type-locality: Off Mayaguez Harbor, Puerto Rico, 412 m. *Fish Hawk* Stn. 6070.
 Distribution: 40°03'N, 70°49'W northern Uruguay, 33°26'S, 59°58'W; Puerto Rico; St. Lucia; Martinique.

Parapenaeus politus Smith, 1881

Description: Pérez Farfante, 1982:200, figs. 3-5.--Williams, 1984:37, fig. 19.
 Type-locality: Off "Martha's Vineyard" (Smith, 1885) 39°55'00"N, 70°54'15"W, 260 m.
 Distribution: Martha's Vineyard, Massachusetts, through Gulf of Mexico; Gulf of Paria off Venezuela (Williams, 1984).
 Florida (personal communication, P. M. Mikkelsen).

Penaeopsis serrata Bate, 1881

Description: Pérez Farfante, 1980b:748, figs. 28-36.
 Type-locality: Off Barbados, "Gulf of Mexico", Blake Stn. 275, 399 m.
 Distribution: Western Atlantic: from east of Barnegat, New Jersey south of Martha's Vineyard, Massachusetts, through the Gulf of Mexico and the Caribbean south to French Guiana; off Rio Grande do Sul, Brazil. Eastern Atlantic: from south of Cabo San Vicent, Portugal, to off Cadiz, Spain and off the northwest coast of Africa to Tamzak ("Tamxat"), Mauritania (Pérez Farfante, 1980b).

Penaeus aztecus Ives, 1891

Description: Pérez Farfante, 1969:527, figs. 39-43, 46-48, 50.--Williams, 1984:24, figs. 9, 10.
 Type-locality: Veracruz, Mexico.
 Distribution: Martha's Vineyard, Massachusetts around Florida Peninsula to northwestern Yucatan (Williams, 1984).

Penaeus brasiliensis Latreille, 1817

Description: Pérez Farfante, 1969:562, figs. 68, 75, 76.--Williams, 1984:28, figs. 11-12.
 Type-locality: Brazil.
 Distribution: Bermudas; off Cape Hatteras, North Carolina to Florida Keys, off Campeche and Yucatan; through Caribbean Sea to Rio Grande do Sul, Brazil (Williams, 1984).

Penaeus duorarum Burkenroad, 1939

Description: Pérez Farfante, 1969:499, figs. 20-22, 25-27, 30-31.--Williams, 1984:28, 29, figs. 13-14.
 Type-locality: Off Mobile Bay, Alabama ($29^{\circ}15'N$ and $88^{\circ}11'W$, 36.5 m Atlantis Stn. 2813).
 Distribution: Lower Chesapeake Bay through Florida Straits, around Mexico to Cape Catoche and Isla Mujeres at the tip of Yucatan Peninsula (Williams, 1984).

Penaeus setiferus (Linnaeus, 1767)

Type-locality: Molde Fjord, west coast of Norway (erroneous locality, evidently incorrectly labeled).
Distribution: Off Wrightsville Beach, North Carolina, through Gulf of Mexico; Cuba through West Indies to near Ilha de Santa Catarina, Brazil (Williams, 1984).

FAMILY SERGESTIDAE

Acetes americanus caroliniae Hansen, 1933

Description: Williams, 1984:50, fig. 33.
Type-locality: Beaufort Inlet (about $34^{\circ}47'N$), North Carolina.
Distribution: Lower Chesapeake Bay (Mobjack Bay and York River) through Gulf of Mexico to Panama, Surinam and French Guiana (Williams, 1984).

Sergestes armatus Kröyer, 1855

Description: Kensley, 1971:232, fig. 8.
Type-locality: Tropical Atlantic.
Distribution: North Atlantic, Mediterranean, off Azores and Canaries, South Atlantic.
Florida (85-250 m) (personal communication, P. M. Mikkelsen).

Sergestes atlanticus H. Milne Edwards, 1830

Description: Kensley, 1971:234, fig. 9.
Type-locality: Near Azores.
Distribution: Mediterranean, North Atlantic, off Azores and Canaries, Sagassum Sea, Off Cape Point. Florida (75-250 m) (personal communication, P. M. Mikkelsen).

Sergestes edwardsii Kröyer, 1855

Description: Crosnier and Forest, 1973:320, figs. 108b, 100b-c, 110c-d.
Type-locality: Tropical Atlantic from 3 degrees S to 10 degrees N.
Distribution: Atlantic Ocean; also reported from the Indo-Pacific and Eastern Pacific but there is some question about the identity of material outside of the Atlantic (Crosnier and Forest, 1973). Florida (65-300 m) (personal communication, P. M. Mikkelsen).

Sergestes henseni (Ortmann, 1893)

Description: Ortmann, 1893:38, pl. 3: fig. 3.
Type-locality: North Atlantic off West Africa.
Distribution: Mediterranean; north Atlantic; western and southern Atlantic; (Crosnier and Forest, 1973). Florida (85-250 m) (personal communication, P. M. Mikkelsen).

Sergestes paraseminudus Crosnier and Forest, 1973

Description: Crosnier and Forest, 1973:313, figs. 105d, 106c-d,f.
Type-locality: Tropical eastern Atlantic; $01^{\circ}55'S$, $8^{\circ}30'E$; 0-50 m.
Distribution: Tropical eastern Atlantic; Florida (85-250 m) (personal communication, P. M. Mikkelsen).

Sergestes pectinatus Sund, 1920

Description: Kensley, 1971:240, fig. 13.
Type-locality: "Atlantic Ocean, equatorial region."
Distribution: Sargassum Sea, North Atlantic, Off Canaries, Azores. Florida (85-250 m) (personal communication, P. M. Mikkelsen).

Sergestes sargassi Ortmann, 1893

Description: Hansen, 1922:148, pl. 9: fig. 2a-p

Type-locality: Off Florida, Sargassum Sea.
 Distribution: NE Atlantic, Sargassum Sea; Florida (75-750 m) (personal communication, P. M. Mikkelsen).

Sergestes vigilax Stimpson, 1860
 Description: Hansen, 1922:159, pl. 1: fig. 8.
 Type-locality: Off the Azores.
 Distribution: NE Atlantic, Indian Ocean from Gulf of Aden to Ceylon and Cocos-Keeling Island; Florida (65-300 m) (personal communication, P. M. Mikkelsen).

Sergia extenuatus Burkenroad, 1940
 Description: Crozier and Forest, 1973:338, figs. 112e-f, 113b, 114g.
 Type-locality: Off the Ivory Coast, 03°45'S, 10°00'W.
 Distribution: Tropical eastern Atlantic (Gabon to Angola); Florida (85-250 m) (personal communication, P. M. Mikkelsen).

Sergia splendens Sund, 1920
 Description: Kensley, 1971:260, fig. 23.
 Type-locality: Unknown
 Distribution: North Atlantic, Mediterranean (off Monaco), off Table Bay. Florida (85-250 m) (personal communication, P. M. Mikkelsen).

FAMILY LUCIFERIDAE

Lucifer faxoni Borradaile, 1915
 Description: Williams, 1984:52, fig. 34.
 Type-locality: Hampton Roads, Virginia (Chace 1972).
 Distribution: "Coastal waters of North and South America from Long Island Sound to Rio de Janeiro," around Gulf of Mexico and throughout Caribbean Sea (probably widespread); Bermuda and scattered mid-Atlantic occurrences in path of Gulf Stream; Bay of Dakar, Senegal (Bowman and McCain, 1967).

Type-locality: The Reach, Bermuda.

Distribution: Bermuda; off Savannah, Georgia, off Fort Pierce, Florida; Guadeloupe; Cape Verde Islands and Gabon; off northern Kenya (Bruce, 1975; Gore and Wilson, 1978); (Williams, 1984).

Discias serratirostris Lebour, 1949

Description: Wilson and Gore, 1979:311, fig. 1
 Type-locality: Off Castle Roads, Bermuda.
 Distribution: 3 mi. off Castle Roads, Bermuda, Vero Beach, Indian River County, on the central eastern coast of Florida.

Pseudocheles chacei Kensley, 1983

Description: Kensley, 1983:22, figs. 18-22.
 Type-locality: Looe Key, Florida.
 Distribution: Looe Key, Florida to Carrie Bow Cay, Belize.

FAMILY EUGONATONOTIDAE

Eugonatonotus crassus (A. Milne Edwards, 1881)

Description: A. Milne Edwards, 1881:10.-- Boone, 1927:106, figs. 22, 23.
 Type-locality: Caribbean Sea, off Grenada, 479 m, *Blake* Str. 249.
 Distribution: Bahamas, Guianas, and westward into eastern Gulf of Mexico, Yucatan, and Honduras; 26°28'N, 84°42'W, 228 m; 26°20'N, 84°42'W, 216 m, from stomach of *Epinephelus flavolimbatus*. (personal communication, D. K. Camp).
 Pacific: from Borneo through the Philippines to Japan.

FAMILY RHYNCHOCINETIDAE

Rhynchocinetes rigens Gordon, 1936

Description: Gordon, 1936:75, figs. 1-7.-- Manning, 1961a:1, figs. 1, 2.
 Type-locality: Pontinha Bay, Madeira Island.
 Distribution: Florida; Bahamas; Virgin Islands; Bermuda; Madeira and Azores.

FAMILY GNATHOPHYLLIDAE

Gnathophylloides mineri Schmitt, 1933

Description: Schmitt, 1933:7, fig. 3.
 Type-locality: Coral reefs at Ballena Point, Ensenada, Puerto Rico.
 Distribution: Southeastern Florida, Yucatan, and Caribbean Sea (Chace, 1972).

Type-locality: Off Sand Key, Florida; 216 m.

Distribution: Known only from the type-locality.

Palicus gracilis (Smith, 1883)

Description: Rathbun, 1918:218, text-fig. 132, pl. 50, pl. 51: fig. 1.

Type-locality: Martha's Vineyard, Massachusetts, 260 m.

Distribution: Off Massachusetts; east coast of Florida; northwest Florida; Louisiana to central east coast of Mexico; north coast of Cuba; Curaçao (Powers, 1977).

Palicus obesus (A. Milne Edwards, 1880)

Description: Rathbun, 1918:205, fig. 125, pl. 49.

Type-locality: 23°13'N, 89°16'W, 154 m.

Distribution: Off northwest Florida and Mississippi; Campeche, Mexico (Powers, 1977).

Palicus sica (A. Milne Edwards, 1880)

Description: Williams, 1984:483, fig. 380.

Type-locality: Barbados, 150 m, *Blake Stn. 293*.

Distribution: Off Charleston, South Carolina, to northeast Cape Canaveral, Florida; west coast of Florida through West Indies to Barbados and Grenada (Williams, 1984).

FAMILY CRYPTOCHIRIDAE

Pseudocryptochirus corallicola (Verrill, 1908)

Description: Shaw and Hopkins, 1977:178, figs. 2b, 3b.

Type-locality: Dominica.

Distribution: Known only from Western Atlantic: Dominica Island on *Mussa*; Bermuda Islands on *Mussa*, *Meandra* (= *Manicina*) and *Dichocognia*; Dry Tortugas, Florida on *Meandra* (= *Manicina*) *areolata* and *Meandrina*; Florida Middle Ground on *Scolymia lacera*, multiple polyp *Scolymia*, and *Manicina areolata* (Shaw and Hopkins, 1977).

Pseudocryptochirus hypostegus Shaw and

Hopkins, 1977

Description: Shaw and Hopkins, 1977:179, figs. 1, 2a, 3a.

Type-locality: Florida Middle Ground about 137 km west of Tarpon Springs, Florida 28°30'49"N, 84°20'30"W, 27 m, from *Agaricia fragilis*.

Distribution: Known only from the eastern Gulf of Mexico on the Florida Middle Ground, in 25-30 meters, on *Agaricia fragilis* (Shaw and Hopkins, 1977).

ADDENDUM

The records cited below came to our attention or were published after this volume was completed.

FAMILY PALAEMONIDAE

Neopontonides chacei Heard, 1986

Description: Heard, 1986:472, figs. 1A, 2, 3, 4B-D.

Type-locality: Reef south of Marigot Bay, St. Lucia Island.

Distribution: Florida Keys south to Carrie Bow Cay, Belize, on the gorgonian *Pseudopterogorgia americana*.

Periclimenaeus bredini Chace, 1972

Description: Chace, 1972:26, fig. 5.

Type-locality: Isla Mujeres off the Yucatan Peninsula.

Distribution: Known from the type-locality and the Florida Middle Grounds (Dardeau, 1984) where it was collected from a sponge.

Pontonia mexicana Guérin-Méneville, 1855

Description: Holthuis, 1951b:130, pl. 41.

Type-locality: Mexico (Holthuis, 1951b).

Distribution: Bahamas and Dry Tortugas; east coast of Mexico; West Indies (Chace, 1972).

Pseudopontonides principis (Crailes, 1980)

Description: Crailes, 1980:68.--Heard, 1986:481, Figs. 5A-F.

Type-locality: Awa di Oostpunt, Curacao.

Distribution: Northeastern Gulf of Mexico; Puerto Rico; Bonaire and Curacao. On antipatharians.

FAMILY ALPHEIDAE

Alpheus bahamensis Rankin, 1898

Description: Zimmer, 1913:405, figs. U¹-Z¹ (as *A. hippothoe* var. *edamensis*?).--Chace, 1972:58.

Type-locality: New Providence Island, Bahamas.

Distribution: Bermudas; Dry Tortugas; Yucatan Peninsula; West Indies (Chace, 1972).

Fenneralpheus chacei Felder and Manning, 1986

Description: Felder and Manning, 1986:498, figs. 1-3.

Type-locality: Fort Pierce Inlet, St. Lucie

Country, Florida.

Distribution: Fort Pierce and Key West, Florida (Felder and Manning, 1986).

Salmoneus cavicolus Felder and Manning, 1986

Description: Felder and Manning, 1986:503, figs. 4-6.

Type-locality: South side of Fort Pierce Inlet, St. Lucie County, Florida.

Distribution: Known only from the type-locality.

Synalpheus scaphoceris Coutière, 1910

Description: Dardeau, 1986:491, figs. 1-3.

Type-locality: Dry Tortugas, Florida.

Distribution: Gulf of Mexico: Isla de Lobos, West Flower Garden Bank, East Flower Garden Bank, Florida Middle Grounds, off Sanibel Island, Dry Tortugas; Caribbean: Puerto Rico and Curacao; Brazil (Dardeau, 1986).

FAMILY GONEPLACIDAE

Chasmocarcinus chacei Felder and Rabalais, 1986

Description: Felder and Rabalais, 1986:548, figs. 1, 2a-g, 3a-h.

Type-locality: Vicinity of Flower Garden Banks, northwestern Gulf of Mexico (27°53.97'N, 93°34.79'W, 126 m).

Distribution: Gulf of Mexico from the Texas coast to Dry Tortugas, Florida; possibly off Anguilla (Felder and Rabalais, 1986).

Speocarcinus carolinensis Stimpson, 1859

Description: Williams, 1984:437, fig. 349.--Felder and Rabalais, 1986:572, figs. 11d-f, 12.

Type-locality: Charleston Harbor, South Carolina.

Distribution: South of Cape Hatteras, North Carolina, through the West Indies to Amapá, Brazil (Williams, 1984). Dry Tortugas and the Marguesas Keys, Florida (Felder and Rabalais, 1986).

Key to families of Florida decapods

[Based on Rathbun, 1918, 1930, 1937, Barnard, 1950,
Holthuis, 1955, and Williams, 1984]

1. General form shrimplike, usually compressed; pleuron of second somite never overlapping that of first somite; first 3 pairs of pereopods usually chelate (except in some Sergestoidea), third pair never unusually robust 2
- General form shrimplike, lobsterlike, or crablike; if shrimplike with pleuron of second abdominal somite overlapping that of first somite and third pair of pereopods not chelate or unusually enlarged (except Stenopodidae, with pleuron of second abdominal somite not overlapping that of first somite; third pereopods chelate, stronger than preceding) 8
2. (1) Fourth and fifth pereopods well developed..... 3
Fourth and fifth pereopods reduced or absent..... 7
3. (2) Postorbital spine present..... **Solenoceridae** (page 97)
Postorbital spine absent..... 4
4. (3) Integument rigid, of stony appearance; cervical groove very faint or absent..... **Sicyoniidae** (page 109)
Integument more or less flexible, not stony and rigid in appearance; cervical groove present and easily discerned 5
5. (4) Eyestalks without tubercles on their mesial (inner) borders; epipods absent behind third pereopods **Penaeidae** (page 82)
Eyestalks each with tubercle on its mesial (inner) border; epipods on all coxae from second maxillipeds through fourth pereopods 6
6. (5) Distal, filamentous portion of upper antennular flagellum extensively developed..... **Benthesicymidae** (page 79)
Distal, filamentous portion of upper antennular flagellum not extensively developed. **Aristeidae** (page 79)
7. (2) Anterior region of cephalothorax not greatly elongate; gills present..... **Sergestidae** (page 115)
Anterior region of cephalothorax greatly elongate; gills absent..... **Luciferidae** (page 125)
8. (1) Form shrimplike; usually with body compressed..... 9
Form lobsterlike or crablike..... 24

9. (8) Pleuron of second abdominal somite not overlapping that of first somite; third pereopods chelate, stronger than preceding **Stenopodidae** (page 281)
- Pleuron of second abdominal somite overlapping that of first somite; third pair of pereopods never chelate 10
10. (9) First pair of pereopods chelate or simple..... 11
- First pair of pereopods subchelate..... 23
11. (10) Fingers of all four chelae slender, their cutting edges pectinate.....
..... **Pasiphaeidae** (page 137)
- Cutting edges of fingers of chelae not all pectinate..... 12
12. (11) Carpi of second pair of pereopods entire; first pair of pereopods always with well-developed chelae 13
- Carpi of second pair of pereopods usually subdivided into two or more segments; if not, first pair of pereopods not chelate 19
13. (12) First pair of pereopods stronger and heavier though often shorter than second.... 14
- First pair of pereopods usually more slender than, rarely subequal to, second..... 16
14. (13) Ends of fingers of first two pairs of pereopods not dark colored; ultimate segment of second maxilliped placed at end of penultimate segment; exopod of first maxilliped without flagellum **Bresiliidae** (page 141)
- Ends of fingers of first two pairs of pereopods dark colored; ultimate segment of second maxilliped applied as strip alongside of penultimate segment; exopod of first maxilliped with distinct flagellum 15
15. (14) Rostrum immovable; exopods on pereopods..... **Eugonatonotidae** (page 145)
- Rostrum movable; no exopods on pereopods..... **Rhynchocinetidae** (page 145)
16. (13) Pereopods usually with exopods; if not, fingers of chelae with terminal brushes of long hairs 17
- Pereopods without exopods; chelae without terminal brushes of long hairs..... 18
17. (16) Mandible without palp; fingers of chelae usually with conspicuous terminal brushes of hairs; last three pairs of pereopods not conspicuously lengthened; pereopods with or without exopods **Atyidae** (page 127)
- Mandible with palp; fingers of chelae without terminal brushes of hairs; pereopod with exopods (last three pairs of pereopods not conspicuously lengthened; carpi of these pereopods distinctly shorter than propodi) **Oplophoridae** (page 131)

18. (16) Mandible usually with incisor process; if not, third maxilliped not expanded or leaf-like **Palaemonidae** (page 152)
- Mandible without incisor process; third maxilliped expanded and leaf-like.....
..... **Gnathophyllidae** (page 149)
19. (12) Chelae of first pair of pereopods microscopically small or absent (mandible bifid, with palp; rostrum laterally compressed, distinctly dentate)
..... **Pandalidae** (page 262)
- Chelae of first pair of pereopods distinct, at least on one side..... 20
20. (19) First pair of pereopods both chelate; rostrum dentate or unarmed, not with single subdistal dorsal tooth 21
- Usually right first pereopod chelate, the other ending in simple claw-like dactyl; if both chelate, rostrum with subdistal dorsal tooth **Processidae** (page 254)
21. (20) Ends of fingers of first pair of chelae usually dark colored; first pair of chelipeds short and rather heavy but not swollen; eyes free, never extremely elongate
..... **Hippolytidae** (page 230)
- Ends of fingers of first pair of chelae not dark colored; eyes either extremely long or partly or wholly covered by carapace 22
22. (21) Eyes extremely elongate, reaching almost to end of antennular peduncle; cornea small; first pair of pereopods shorter than and about as robust as second
..... **Ogyrididae** (page 251)
- Eyes usually partly or wholly covered by carapace, never very elongate; first pair of pereopods distinctly stronger than second, often unequal and swollen
..... **Alpheidae** (page 194)
23. (10) Carpi of second pair of pereopods multi-articulate.....
..... **Glyphocrangonidae** (page 277)
- Carpi of second pair of pereopods not subdivided..... **Crangonidae** (page 271)
24. (8) Body lobsterlike and strongly calcified; abdomen with pleura well developed; first three pairs of pereopods either all chelate or none chelate 25
- Body crablike or lobsterlike, sometimes weakly calcified in part; pleura often reduced or absent; first three pairs of pereopods never alike; first, second, or first and second pereopods chelate or subchelate 28
25. (24) First three pairs of pereopods chelate, first largest; uropods well developed, lateral ramus (uropodal exopod) transversely divided .. **Nephropidae** (page 285)
- First three pairs of pereopods never chelate; uropods well developed, lateral ramus without transverse division 26

26. (25) Carapace with small rostrum; first pereopods much larger than others (body tubular; antennae cylindrical, shorter than body) *Synaxiidae* (page 323)
Carapace without rostrum; first pereopods not enlarged except in *Justitia* 27
27. (26) Carapace subcylindrical; antennal flagella long, strong, and spiny.....
..... *Palinuridae* (page 313)
Carapace more or less flattened dorsoventrally, lateral margins sharp; antennae short, flagella replaced by plates with dentate or lobulate margins
..... *Scyllaridae* (page 316)
28. (24) Either lobsterlike or crablike; abdomen extended, bent upon itself, or flexed beneath thorax; last thoracic sternite free; uropods present; carapace not fused with epistome; first, second, or first 2 pairs of pereopods chelate or subchelate 29
Crablike; abdomen permanently flexed beneath carapace; last thoracic sternite fused with preceding; uropods rarely present, never biramous; carapace fused with epistome; first pair of pereopods chelate or subchelate 40
29. (28) Second to fourth pereopods with dactyli conspicuously curved and flattened; abdomen much reduced in size and flexed beneath thorax 30
Second to fourth pereopods with dactyli not conspicuously curved and flattened; abdomen well developed but may be flexed beneath thorax 31
30. (29) First pair of pereopods subchelate; carapace depressed... *Albuneidae* (page 427)
First pair of pereopods simple; carapace subcylindrical..... *Hippidae* (page 433)
31. (29) Abdomen usually asymmetrical (rarely secondarily straightened), usually membranous and with uropods adapted for holding body in hollow objects; rarely leathery, unprotected, and bent under thorax 32
Abdomen symmetrical and obviously segmented; uropods well developed for swimming, never for holding body in hollow objects 35
32. (31) Third maxillipeds approximated at base; chelipeds subequal, or left much larger than right, rarely with right slightly larger than left 33
Third maxillipeds widely separated at base by sternum; right cheliped usually much larger than left, left never larger than right, occasionally subequal 34
33. (32) Ventral antennular flagellum ending in filament..... *Diogenidae* (page 330)
Ventral antennular flagellum ending bluntly..... *Coenobitidae* (page 327)

34. (32) Carapace firm anteriorly, more or less membranous posteriorly; rostrum obsolete or nearly so; fourth pereopods unlike third **Paguridae** (page 359)
- Carapace firm all over, spiny in many species; rostrum more or less spiniform; fourth pereopods like third **Lithodidae** (page 355)
35. (31) Body subcylindrical; first two pairs of pereopods chelate or subchelate (first only in Upogebiidae); abdomen extended 36
- Body slightly depressed; only first pereopods chelate; abdomen bent under thorax. 38
36. (35) No *linea thalassinica*; both movable and fixed antennal thorns present; first pereopods strongly chelate and conspicuously hairy **Axiidae** (page 289)
- Linea thalassinica* present; fixed antennal thorn absent; first pereopods chelate or subchelate but not conspicuously hairy 37
37. (36) First pereopods chelate; rostrum inconspicuous or absent..... **Callianassidae** (page 293)
- First pereopods subchelate; rostrum well developed, dorsally flattened, spiny, and hairy **Upogebiidae** (page 309)
38. (35) Form somewhat lobsterlike; rostrum extended, well developed; abdomen loosely flexed beneath posterior thorax; third maxilliped pediform 39
- Form crablike (*Euceramus elongatus*) with abdomen completely folded under thorax; rostrum short and broad or wanting; third maxilliped flattened, operculiform **Porcellanidae** (page 410)
39. (38) Antennal peduncle composed of four movable segments; telson subdivided into two or more plates, not folded sharply against itself, without lateral indentation ... **Galatheidae** (page 397)
- Antennal peduncle with five segments, third segment not being fused with second; telson never subdivided into two or more plates, folded sharply against itself, with lateral indentation **Chirostylidae** (page 393)
40. (28) Mouth-frame (buccal cavity) triangular..... 41
- Mouth-frame (buccal cavity) more or less quadrate..... 46

41. (40) Posterior thoracic sternites narrow, keel-like (bases of 2nd-4th pereopods close together); last pair of pereopods dorsal in position; female genital openings coxal (body elongate in dorsal view, subcylindrical; pereopods adapted for burrowing; orbits hidden ventrolaterally if present; *linea homolica* absent) **Raninidae** (page 455)
- Posterior thoracic sternites broad (bases of walking legs far apart); last pair of pereopods normal in position, or last two pairs dorsal; female genital openings sternal (except in Cyclodorippidae) 42
42. (41) Carapace subquadrilateral or subcircular, short, leaving the first 2 or 3 abdominal segments exposed; last two pairs of pereopods dorsal in position, ending in hook-like movable fingers 43
- Carapace of usual crablike shape 45
43. (42) Third maxilliped leaving all anterior part of buccal cavity uncovered **Dorippidae** (page 461)
- Third maxilliped greatly elongate and not leaving any appreciable portion of buccal cavity uncovered 44
44. (43) Third maxilliped with flagellum **Cymonomidae** (page 443)
- Third maxilliped without flagellum **Cyclodorippidae** (page 447)
45. (42) Afferent opening to each gill chamber in front of base of cheliped **Calappidae** (page 465)
- Afferent opening to each gill chamber at base of outer (third) maxilliped **Leucosiidae** (page 479)
46. (40) Last pair of pereopods abnormal, dorsal; female openings coxal; first abdominal limbs of female present; gills usually many 47
- Last pair of pereopods normal, rarely reduced, not dorsal, except in *Palicus* (Palicidae) and *Retropluma*; female openings sternal; first abdominal limbs of female wanting; gills few 50
47. (46) Sternum of female with longitudinal grooves; vestiges of sixth abdominal limbs usually present; eyes usually completely sheltered by orbits when retracted 48
- Sternum of female without longitudinal grooves; no vestiges of sixth abdominal limbs; eyes incompletely or not at all sheltered by orbits when withdrawn against body 49

48. (47) Vestiges of sixth abdominal limbs present (except in *Hypoconcha*, where also no mastigobranchs are present); carapace usually not longer than broad, with well-marked side edge [mastigobranchs on first pereopods (chelipeds) only or none] ... **Dromiidae** (page 437)
- No vestige of sixth abdominal limbs; carapace longer than broad, with ill-marked side edge; first three pereopods with mastigobranchs, fourth and fifth small, subdorsal, and prehensile **Homolodromiidae** (page 443)
49. (47) Body rectangular; basal article of eyestalk not much longer than terminal article.... **Homolidae** (page 451)
- Body pyriform; basal article of eyestalk much longer than terminal article..... **Latreilliidae** (page 451)
50. (46) Forepart of body narrow, usually forming distinct rostrum; body more or less triangular; orbits generally incomplete 51
- Forepart of body broad; rostrum usually reduced or wanting; body oval, round, or square; orbits nearly always well enclosed 52
51. (50) Chelipeds not much larger than other pereopods; hooked hairs almost always present; second segment of antenna well developed, usually fused with epistome and front **Majidae** (page 493)
- Chelipeds very much larger than other pereopods; hooked hairs almost always absent; second segment of antenna small, short, and not fused with epistome or front **Parthenopidae** (page 558)
52. (50) Merus of third maxilliped small, bearing terminally carpus of nearly its own width; ischium very broad; body somewhat oblong; antennule not retractile into sockets; parasitic on corals **Cryptochiridae** (page 727)
- Carpus of third maxilliped articulate at or near antero-lateral angle of merus; body usually rounded or transversely oval; male openings nearly always coxal; right chela larger than left in many species 53
- Carpus of third maxilliped not articulating at or near inner angle of merus; body usually square or squarish; male openings sternal except in *Retropluma*, where duct passes along a sternal groove to coxopodite; right chela almost never larger than left (except Palicidae) 57
53. (52) Pereopods more or less distinctly adapted for swimming; usually a small lobe on inner angle of endopod in first maxillipeds; first antenna fold slanting or transverse **Portunidae** (page 572)
- Pereopods not adapted for swimming, or if so modified, then male genital duct opening sternally or running in sternal groove; inner lobe on endopod in first maxillipeds wanting 54

54. (53) Antennule folds lengthwise..... 55
 Antennule folds slanting or transversely..... 56
55. (54) Carapace subcircular; antennal flagella either long and hairy or wanting.....
 Atelecyclidae (page 569)
- Carapace broadly oval or hexagonal; antennal flagella present, short, not hairy.....
 Cancridae (page 569)
- [The following three families are not sharply separated.]
56. (54) Carapace usually transversely oval or transversely hexagonal (xanthoid); male
 openings coxal; male abdomen greatly narrowed in segments 4-7; tending to
 occur in shallow water Xanthidae (page 603)
- Carapace subquadrate to xanthoid; male openings coxal with genital duct lying in
 groove between sternites 7 and 8 or sternal; male abdomen somewhat more
 triangular than above; part of sternite 8 visible from above at level of second
 abdominal segment but variable in size (some species in above family share this
 character); tending to occur in deeper water near edge of continental shelf
- Gonoplacidae (page 591)
- Carapace hexagonal to trapezoidal in shape, with anterolateral margins generally
 armed with three to five teeth, with front bearing four short teeth; orbits and eyes
 well developed; antennules transverse or transversely oblique; basal antennal
 article movable and not reaching front of carapace; genital openings in male coxal;
 pereopods long and compressed Geryonidae (page 569)
57. (52) Small, usually commensal crabs, with very small eyes and orbits; body usually
 more or less rounded Pinnotheridae (page 681)
- Free-living crabs, with eyes not especially reduced and usually square body.... 58
58. (57) Last pair of pereopods dorsally placed and weaker than others; interantennular
 septum very thin; no distinct epistome; exopod of third maxilliped not hidden
- Palicidae (page 718)
- Last pair of pereopods not dorsally placed or markedly weaker than others;
 interantennular septum not very thin 59
59. (58) Gap of greater or less size between third maxillipeds; front very or moderately
 broad 60
- Third maxillipeds almost or quite close to mouth; front moderately or very narrow.
 Ocypodidae (page 707)
60. (59) Sides of body either straight or very slightly arched; shape squarish; front broad..
 Grapsidae (page 665)
- Sides of body strongly arched; shape transversely oval; front narrow.....
 Gecarcinidae (page 661)

1. Lateral rostral grooves reaching only slightly beyond posterior rostral tooth; rostrum long and slightly upturned at tip in individuals exceeding 22 mm total length; ground color light gray, sometimes with greenish cast in shrimp taken from beds of vegetation; chromatophores (widely spaced except on spines, ridges, and uropods) colored slate-blue and brown; uropods with reddish-brown to brown areas distally *P. setiferus*
- Lateral rostral grooves reaching almost to posterior margin of carapace (shallow in 17-mm individuals); rostrum relatively short; color gray to light brown, sometimes with greenish cast in shrimp taken from beds of vegetation; chromatophores numerous and closely spaced, often in bands or patches 2
2. (1) Rostrum with toothed dorsal margin straight; tip attenuate and straight *P. brasiliensis*
- Rostrum with toothed dorsal margin slightly arched over eye; tip short or attenuate and slightly upturned 3

3. (2) Rostrum usually not upturned at tip and not extremely attenuate; chromatophores slate-blue and brown; usually with conspicuously pigmented lateral spot at juncture of third and fourth abdominal somites; uropods with uniform sprinkling of chromatophores, degree of transparency uniform throughout (color more dense in older individuals) *P. duorarum*

Rostrum usually slightly upturned and attenuate at tip; chromatophores brown and olive-green; usually lacking lateral spot at juncture of third and fourth abdominal somites; uropods with reddish-brown to brown areas distally *P. aztecus*

Key to genera and species
[Adapted from Chace, 1972]

1. Movable plate at posterolateral angle of sixth abdominal somite..... 2
 - No movable plate at posterolateral angle of sixth abdominal somite..... 3
2. (1) Rostrum lacking; antennular peduncle long and slender, stylocerite closely appressed to basal segment; exopod of uropod distally truncate (telson with convex distal margin; first chelipeds carried with chela flexed against merus, opposable margins of fingers of major chela dentate) *Leptalpheus forceps*
 - Rostral projection present; antennular peduncle short and stout, stylocerite well separated from basal segment; exopod of uropod distally rounded (first chelipeds carried extended) *Alpheopsis*
3. (1) Eyes completely exposed dorsally; movable finger of major first chela without molar-like tooth fitting into socket in immovable finger *Autamate*
 - Eyes concealed from all but anteroventral view by deflexed frontal margin of carapace; movable finger of major first chela usually provided with large molar-like tooth fitting into socket in immovable finger 4
4. (3) Posterior margin of carapace without "cardiac notch" at base of branchiostegite; exopod of uropod without transverse suture (rostral projection lacking, front unarmed; antepenultimate segment of third maxilliped normal, not unusually expanded; epipods present on at least 2 anterior pairs of pereopods) *Thunor simus*
 - Posterior margin of carapace with "cardiac notch"; exopod of uropod with transverse suture 5
5. (4) Pereopods without epipods; second pleopod of male without appendix masculina (front tridentate; antepenultimate segment of third maxilliped normal, not unusually expanded; dactyli of 3 posterior pereopods biunguiculate) *Synalpheus*
 - Epipods present on at least 2 anterior pairs of pereopods; second pleopod of male with appendix masculina 6
6. (5) Labrum and mandible not unusually enlarged; antepenultimate segment of third maxilliped not unusually expanded; fourth pereopod with mastigobranch epipod; appendix masculina normal, not reaching distal end of either endopod or exopod of male second pleopod *Alpheus*
 - Labrum greatly swollen and enveloped by expanded incisor process of mandible; antepenultimate segment of third maxilliped broadened to form partial operculum over anterior mouthparts; fourth pereopod without mastigobranch epipod; appendix masculina greatly enlarged and elongate, overreaching distal ends of both endopod and exopod of second pleopod *Metalpheus rostratipes*

Genus *Alpheopsis* Coutière, 1896

Key to species

Anterior region of carapace with rostrum and ocular teeth (chela with longitudinal as well as transverse groove) *A. trispinosus*

Anterior region of carapace without ocular teeth (carpus of second pereopod with first segment about as long as combined lengths of second and third segments) *A. labis*

Genus *Alpheus* Fabricius, 1798

Key to species
[Adapted from Chace, 1972]

1. Frontal region evenly convex dorsally, adrostral depressions lacking; fingers of minor first chela strongly curved in vertical plane (rostrum short, subrectangular, not elevated in midline; ocular hoods subrectangular, frontal margin broadly tridentate; major first chela subcylindrical, without marginal notches on palm; proximal article of carpus of second pereopod longer than second segment; third and fourth pereopods with dactylus biunguiculate, merus without distal tooth on inferior margin, ischium without movable spine on lateral surface) *A. cylindricus*
- Ocular hoods mesially delimited by adrostal depressions or furrows; fingers of minor first chela not noticeably curved in vertical plane 2
2. (1) Rostrum dorsally flat, at least in distal portion; ocular hood armed with spine arising from surface of hood, not from margin, although appearing marginal in *A. malleator* because of receding ventral portion of hood (adrostral furrows sharply defined and partially delimited posteriorly; marginal lobe or projection between rostrum and ocular hood; proximal segment of carpus of second pereopod longer than second segment) 3
- Rostrum either rounded or carinate in dorsal midline, not flat; ocular spine, if present, arising from margin of hood 5
3. (2) Spine on ocular hood arising from mesial slope, overhanging adrostral furrow; meri of third and fourth pereopods armed with distal tooth on inferior margin (fingers of minor chela of male not "balaeniceps"-shaped; third and fourth pereopods with simple dactyli and movable spine on lateral surfaces of ischia. Small tooth or tubercle in midline of carapace in line with posterior limits of adrostral furrows; palm of major first chela with superior and inferior margins entire, not notched, immovable finger notched on opposable margin distal to socket; distolateral spine on exopod of uropod dark-colored in male) *A. armatus*
- Spine on ocular hood arising from anterior slope, overhanging frontal margin; meri of third and fourth pereopods unarmed at distal end of inferior margin (immovable finger of major first chela notched on opposable margin distal to socket; distolateral spine on exopod of uropod dark-colored in male) 4

4. (3) Ventrolateral tooth on basal segment of antennal peduncle not overreaching stylocerite; scaphocerite lacking prominent tooth or lobe near proximal end of outer margin; merus of first pereopod with distal tooth on mesial inferior margin; palm of major first chela with both superior and inferior margins entire, not notched; movable finger of minor first chela laterally and mesially carinate, densely setose, "balaeniceps"-shaped in both males and females; third and fourth pereopods with dactyli simple, ischia with movable spines on lateral surfaces; distolateral spine on exopod of uropod dark-colored in both male and female *A. formosus*
- Ventrolateral tooth on basal segment of antennal peduncle distinctly overreaching stylocerite; scaphocerite with prominent curved tooth or lobate projection near proximal end of outer margin; merus of first pereopod without distal tooth on inferior margin; palm of major first chela notched superiorly; minor first chela not "balaeniceps"-shaped in either male or female; third and fourth pereopods with dactyli biunguiculate, ischia unarmed; distolateral spine on exopod of uropod dark-colored in male only *A. malleator*
5. (2) Ocular hoods spined (adrostral furrows not abruptly delimited posteriorly; scaphocerite without large tooth or lobe near proximal end of lateral margin) 6
- Ocular hoods not spined (third and fourth pereopods with simple dactyli) 10
6. (5) Merus of first pereopod with sharp distal tooth on mesial inferior margin; third and fourth pereopods with dactyli not distinctly biunguiculate (meri of third and fourth pereopods without distal teeth on inferior margins) 7
- Merus of first pereopod without distinct sharp tooth at distal end of inferior margin; third and fourth pereopods with dactyli distinctly biunguiculate 9
7. (6) Third and fourth pereopods with inconspicuous denticles on inferior margins of dactyli, ischia without movable spines on lateral surfaces *A. websteri*
- Third and fourth pereopods without accessory denticle on inferior margins of dactyli, ischia with movable spines on lateral surfaces 8
8. (7) Major first chela twisted and bearing single distinct sharp teeth on distal ends of both lateral and mesial surfaces of palm *A. amblyonyx*
- Major first chela not twisted and not bearing sharp teeth on distal ends of both lateral and mesial surfaces of palm *A. thomasi*
9. (6) Third and fourth pereopods without distal teeth on inferior margins of meri *A. candei*
- Third and fourth pereopods with distal teeth on inferior margins of meri *A. peasei*

10. (5) Meri of third and fourth pereopods with prominent acute teeth at distal ends of inferior margins (lobe on frontal margin between rostrum and ocular hood; major first chela subcylindrical, without superior or inferior notches; merus of first pereopod with tooth at distal end of mesial inferior margin; immovable finger of major first chela with notch in opposable margin distal to socket; proximal segment of carpus of second pereopod shorter than second segment; third and fourth pereopods with movable spines on lateral surfaces of ischia) *A. cristulifrons*
- Meri of third and fourth pereopods with distal ends of inferior margins rounded or rectangular, not produced into prominent teeth 11
11. (10) Major first chela notched superiorly 12
- Major first chela with superior and inferior margins entire, not notched (major first cheliped with tooth at distal end of mesial inferior margin of merus; immovable finger of major chela with notch in opposable margin distal to socket; minor first chela of male not "balaeniceps"-shaped; third and fourth pereopods with movable spines on lateral surfaces of ischia) 19
12. (11) Major first chela not notched inferiorly (ocular hoods subtriangularly produced anteriorly; inferior margin of major first chela with shallow sinus at base of immovable finger) *A. normanni*
- Major first chela notched inferiorly 13
13. (12) Third and fourth pereopods with movable spines on lateral surfaces of ischia 14
- Third and fourth pereopods without spines on ischia 17
14. (13) Merus of first pereopod unarmed at distal end of mesial inferior margin; dactyli of third and fourth pereopods usually subspatulate 15
- Merus of first pereopod armed with sharp tooth at distal end of mesial inferior margin; dactyli of third and fourth pereopods not subspatulate 16
15. (14) Major chela with inferior margin of immovable finger distinctly truncate distally; minor first chela of male not "balaeniceps"-shaped *A. estuariensis*
- Major chela with inferior margin of immovable finger more evenly rounded distally, not distinctly truncate; minor first chela of male "balaeniceps"-shaped *A. heterochaelis*
16. (14) Adrostral furrows usually abruptly delimited posteriorly; immovable finger of major first chela without V-shaped notch in opposable margin distal to socket *A. armillatus*
- Adrostral furrows not abruptly delimited posteriorly; immovable finger of major first chela with sharply V-shaped notch in opposable margin distal to socket *A. viridari*

17. (13) Minor first chela with fingers slightly, if at all, more than half as long as palm; proximal segment of carpus of second pereopod much shorter than second segment (fingers of minor first chela not "balaeniceps"-shaped in male) *A. schmitti*
- Minor first chela with fingers about as long as palm; proximal segment of carpus of second pereopod longer than second segment 18
18. (17) Movable finger of major first chela regularly and highly arched throughout length of superior margin; fingers of minor first chela "balaeniceps"-shaped in male; second segment of carpus of second pereopod subequal to fifth segment in length *A. bouvieri*
- Movable finger of major first chela not strongly convex in proximal part of superior margin; fingers of minor first chela not "balaeniceps"-shaped in male; second segment of carpus of second pereopod distinctly longer than fifth segment *A. nuttingi*
19. (11) Rostrum dorsally carinate or subcarinate; proximal segment of carpus of second pereopod shorter than second segment; dactyli of third and fourth pereopods subspatulate *A. floridanus*
- Rostrum dorsally convex, not subcarinate; proximal segment of carpus of second pereopod longer than second segment; dactyli of third and fourth pereopods not subspatulate *A. paracrinitus*

Genus *Automate* De Man, 1888

1. Median frontal projection broadly rounded or subtriangular; propodi of third and fourth pereopods armed with series of stout movable spines on inferior margin (first segment of carpus of second pereopod at least half as long as second segment; dactyli of third and fourth pereopods slender, not subspatulate) *A. gardineri*
Median frontal projection reduced to acute tooth or lacking; propodi of third and fourth pereopods setose, without stout spines 2
2. (l) Median frontal projection a small acute tooth; first segment of carpus of second pereopod much less than half as long as second segment; dactyli of third and fourth pereopods broad, subspatulate *A. evermanni*
Frontal margin transverse, without median projection; first segment of carpus of second pereopod at least half as long as second segment; dactyli of third and fourth pereopods slender, not subspatulate *A. rectifrons*

Genus *Synalpheus* Bate, 1888

Key to species

[Adapted from Chace, 1972, and Dardeau, 1984]

1. Stylocerite not overreaching basal segment of antennular peduncle (except in *S. macclendoni* and *S. paraneptunus*); movable finger of minor first-chela with prominent fringe of long, distally curved hairs on superior surface (reduced to single longitudinal row in *S. paraneptunus*) 2
- Stylocerite distinctly overreaching basal segment of antennular peduncle; movable finger of minor first chela with scattered tufts of straight hairs but without prominent fringe on superior surface (scaphocerite with well-developed blade, lateral spine considerably exceeding that of basicerite in length) 14
2. (1) Both pairs of dorsal spines of telson arising in posterior of segment (ocular hoods blunt, broader than long) *S. heardi*
Anterior or both pairs of dorsal spines of telson arising in anterior of segment.... 3
3. (2) Both pairs of dorsal spines of telson arising in anterior of segment (carapace not distinctly produced at anteroventral angle and not carinate in dorsal midline posterior to base of rostrum; cardiac notch not well marked; ocular teeth acute, as broad as long but not much broader than rostrum; basicerite not produced dorsally; major first chela twisted, immovable finger short, not reaching nearly as far distally as does movable finger; palm of major first chela armed with sharp distal spine; movable finger of minor first chela strongly tridentate in lateral view) *S. pectiniger*
Posterior pair of dorsal spines of telson arising in posterior of segment..... 4
4. (3) Carpus of second pereopod composed of 4 segments..... 5
Carpus of second pereopod composed of 5 segments..... 6
5. (4) Basicerite with strong dorsal spine..... *S. rathbunae*
Basicerite unarmed dorsally..... *S. agelas*
6. (4) Exopod of uropod with 1 fixed tooth on outer margin, sometimes at distolateral angle just lateral to movable spine, sometimes distinctly removed from distolateral angle (basicerite not produced dorsally) 7
Exopod of uropod with 2 or more fixed teeth on outer margin at, and proximal to, distolateral angle 10
7. (6) Scaphocerite with well-developed blade (fingers of minor first chela not bidentate distally) 8
Scaphocerite without blade (ocular teeth distinctly broader than rostrum; stylocerite not reaching as far as distal end of basal antennular segment) 9

8. (7) Ocular teeth slender, not much broader than rostrum; first abdominal pleuron of male without hooklike tooth; stylocerite slightly overreaching distal end of basal antennal segment; major first chela not noticeably twisted, armed with stout spine at distal end of palm *S. mcclendoni*
- Ocular teeth stout, distinctly broader than rostrum; first abdominal pleuron of male armed with hooklike tooth; stylocerite not reaching as far as distal end of basal antennal segment; major first chela twisted, palm terminating distally in spine-tipped lobe *S. sanctithomae*
9. (7) Lateral spine of basicerite not reaching tip of scaphocerite (ocular teeth at least as long as broad; dorsal spines of telson arising from dorsal surface; major first chela not strongly twisted, palm sharply spinous distally; fingers of minor first chela subequally bidentate distally; third pereopod without flanges on merus and carpus) .
..... *S. brooksi*
- Lateral spine of basicerite reaching nearly to, or beyond, tip of scaphocerite (fingers of minor first chela bidentate distally; ocular teeth with lateral margins straight or slightly concave; telson with lateral margins nearly straight; antennular peduncle stout, overreaching scaphocerite by about half of distal segment, stylocerite broad).
..... *S. bousfieldi*
10. (6) Lateral spine of basicerite reaching nearly to, or beyond, tip of scaphocerite (fingers of minor first chela subequally bidentate distally) 11
- Lateral spine of basicerite falling considerably short of tip of scaphocerite (palm of major first chela terminating distally in tubercle armed distally or distoventrally with small, sharp tooth) 12
11. (10) Ocular teeth subacute, only slightly broader than rostrum; palm of major first chela terminating distally in acute projection *S. herricki*
- Ocular teeth rounded, much broader than rostrum; palm of major first chela terminating distally in tubercle armed distoventrally with small, sharp tooth *S. pandionis*
12. (10) Basicerite rounded or obtuse dorsally (movable finger of major first chela barely overreaching normal immovable finger) *S. longicarpus*
- Basicerite rectangular or acute dorsally 13
13. (12) Movable finger of minor first chela broadly tridentate distally in extensor aspect; exopod of uropod armed with 3 or 4 fixed teeth and 1 or 2 movable spines at distal end of outer margin *S. paraneptunus*
- Movable finger of minor first chela simple or bidentate distally; exopod of uropod armed with 8-17 fixed teeth on outer margin (scaphocerite with blade; distal tubercle on palm of major first chela armed distally) *S. goodei*

14. (1) Ocular teeth triangular, not much broader than rostrum, not tapering to slender, sharp tips 15
Ocular teeth elongate, much broader than rostrum, tapering to slender, sharp tips. 17
15. (14) Rostrum with well-developed ventral process preventing corneas of eyes from touching; palm of major first chela unarmed distally; merus of third pereopod short and broad, less than two and one half times as long as broad *S. curacaoensis*
Ventral process of rostrum vestigial or lacking, not preventing corneas of eyes from touching; palm of major first chela with distal tooth or spine; merus of third pereopod about four times as long as broad 16
16. (15) Lateral surface of palm of major chela with 2 broad and sinuous lateral lobes, in addition to sharp superior tooth *S. minus*
Lateral surface of palm of major chela with narrow, prominent unarmed projection between superior tooth and 2 broad lateral lobes *S. brevicarpus*
17. (14) Dactyli of 3 posterior pairs of pereopods with distal tooth on inferior margin distinctly divergent from axis of segment and much broader than superior tooth, inferior margin with prominence proximal to distal tooth (basicerite strongly spinous dorsally) 18
Dactyli of 3 posterior pairs of pereopods with terminal teeth subparallel, no prominence on inferior margin proximal to distal tooth 19
18. (17) Proximal prominence on inferior margin of dactyli of 3 posterior pairs of pereopods low and obtuse *S. fritzmuelleri*
Proximal prominence on inferior margin of dactyli of 3 posterior pairs of pereopods large and sharp *S. hemphilli*
19. (17) Basicerite unarmed dorsally; distal spine on palm of major first chela straight.....
..... *S. townsendi*
..... Basicerite armed dorsally with strong spine (palm of major first chela armed distally with curved spine; merus of third pereopod unarmed; dactyli of 3 posterior pairs of pereopods with distal tooth on inferior margin narrower than superior tooth) *S. apioceros*

1. Arthrobranchs present at bases of first four pairs of pereopods..... *Merhippolyte americana*
- Bases of pereopods without arthrobranchs..... 2
2. (1) Carpus of second pereopod subdivided into more than 7 segments, multiarticulate... 3
Carpus of second pereopod subdivided into no more than 7 segments..... 5
3. (2) Dactyli of third, fourth, and fifth pereopods simple, spines on inferior margin inconspicuous *Exhippolysmata oplophoroides*
Dactyli of third, fourth, and fifth pereopods appearing biungulate because of series of prominent spines on inferior margin 4
4. (3) Supraorbital spines present on carapace..... *Bythocaris nana*
Supraorbital spines absent..... *Lysmata*
5. (2) Third segment of antennular peduncle bearing subtriangular movable plate overhanging base of flagellum dorsally; carpus of second pereopod composed of 6 or 7 segments *Thor*
Antennular peduncle without movable plate overhanging base of flagellum; carpus of second pereopod composed of 2 or 3 segments 6
6. (5) Rostrum with deep ventral blade projecting posteroventrally at posterior end between bases of antennules 7
Ventral lobe of rostrum, if present, not projecting posteroventrally near base..... 8
7. (6) Lateral surface of carapace smooth, not spinose; mandible without palp; carpus of second pereopod composed of 3 segments *Latreutes*
Lateral surface of carapace bearing numerous appressed spines; mandible with 2-segmented palp; carpus of second pereopod composed of 2 segments *Trachycaris restrictus*
8. (6) Supraorbital tooth present; third maxilliped with exopod..... *Hippolyte*
Supraorbital tooth absent; third maxilliped without exopod..... *Tozeuma*

Genus *Hippolyte* Leach, 1814

1. Lateral spine on carapace branchiostegal, overreaching anterior margin; tergum of fifth abdominal somite armed with pair of strong posterior spines; telson with both pairs of dorsolateral spines situated in posterior third of segment; scaphocerite with blade and distolateral spine about equally advanced; dactyli of 3 posterior pairs of pereopods terminating in 2 strong distal spines (rostrum usually with single, inconspicuous tooth on dorsal and ventral margins; basal segment of antennular peduncle armed with prominent distolateral spine) *H. coeruleescens*
Lateral spine on carapace hepatic, not nearly reaching anterior margin in adults; tergum of fifth abdominal somite unarmed; telson with anterior pair of distolateral spines situated near midlength of segment; scaphocerite with blade reaching far beyond distolateral spine; dactyli of 3 posterior pairs of pereopods terminating in either 1 or 3 strong distal spines 2
2. (1) Rostrum usually unarmed dorsally (rarely with 1 or 2 prominent dorsal teeth); dactyli of 3 posterior pairs of pereopods terminating in single distal spine (basal segment of antennular peduncle unarmed distally) *H. nicholsoni*
Rostrum usually armed with 2-4 strong teeth on dorsal margin; dactyli of 3 posterior pairs of pereopods terminating in 3 strong distal spines 3
3. (2) Rostrum usually armed with 3 or 4 strong teeth on dorsal margin and with strong lateral carina in proximal third of length; basal segment of antennular peduncle armed with 1-3 strong distolateral spines *H. curacaoensis*
Rostrum usually armed with 2 (rarely 1 or 3) strong teeth in proximal half of dorsal margin and without distinct lateral carina; basal segment of antennular peduncle unarmed distally 4
4. (3) Rostrum not overreaching antennular peduncle in adult females, barely overreaching basal antennular segment in males *H. pleuracanthus*
Rostrum distinctly overreaching antennular peduncle in adult females, extending nearly as far as distal margin of second antennular segment in males *H. zostericola*

Genus *Latreutes* Stimpson, 1860

1. Scaphocerite overreaching antennular peduncle slightly, if at all (rostrum with 4-6 ventral teeth; antennal tooth distinct from depressed and obscure ventral angle of orbit; carapace with pterygostomian tooth on anteroventral margin; stylocerite falling far short of distal margin of basal antennular segment; distal tooth of scaphocerite distinctly overreaching distal margin of blade; exopod of third maxilliped reaching at least to midlength of antepenultimate segment; carpus of second pereopod composed of 17-23 segments) *L. amboinensis*
Scaphocerite distinctly overreaching antennular peduncle (exopod of third maxilliped reaching to, or beyond, midlength of antepenultimate segment) 2
2. (1) Antennal tooth fused with ventral angle of orbit; stylocerite reaching beyond distal margin of basal segment of antennular peduncle; accessory branch of dorsolateral antennular flagellum well developed (2 to 4 teeth of dorsal rostral series situated on carapace posterior to level of orbital margin; carapace with pterygostomian tooth on anteroventral margin; scaphocerite more than four times as long as wide, distal tooth distinctly overreaching distal margin of blade; carpus of second pereopod composed of 28-30 segments) *L. intermedia*
Antennal tooth distinct from depressed and obscure ventral angle of orbit; stylocerite falling far short of distal margin of basal antennular segment; accessory branch of dorsolateral antennular flagellum vestigial or absent 3
3. (2) Rostrum usually reaching as far as, or beyond, distal end of antennular peduncle; scaphocerite five times as long as wide *L. rathbunae*
Rostrum reaching not much, if at all, beyond second segment of antennular peduncle; scaphocerite less than four times as long as wide *L. wurdemanni*

1. No vestige of supraorbital tooth; anterolateral margin of carapace faintly angular, with microscopic branchiostegal tooth; distal margin of telson armed typically with 4 pairs of spines; endopod of first pleopod of functional males with mesial margin sparsely setose; appendix masculina (not including setae) of functional males falling short of distal end of endopod of second pleopod; associated with sea anemones (merus of first pereopod unarmed in distal half of inferior margin; eggs not very large, increasing in major diameter during development from 0.48 to 0.70 mm) *T. amboinensis*
- Supraorbital tooth represented by obtuse prominence; anterolateral margin of carapace rounded, unarmed; distal margin of telson armed with 3 pairs of spines; endopod of first pleopod of functional males with mesial margin densely setose; appendix masculina (not including setae) of functional males reaching nearly to, or beyond, distal end of endopod of second pleopod; not usually associated with sea anemones 2
2. (1) Merus of first pereopod armed with 1 or 2 spines in distal half of inferior margin (dactyli of fourth and fifth pereopods commonly armed with 5--not usually 4 or 6--spinules on inferior margin proximal to distal pair of spines; eggs not very large, increasing in major diameter during development from 0.36 to 0.74 mm) *T. dobktini*
 Merus of first pereopod unarmed in distal half of inferior margin 3
3. (2) Dactyli of fourth and fifth pereopods commonly armed with 4 or 5 (rarely 3 or 6) spinules on inferior margin proximal to distal pair of spines; eggs large and few, increasing in major diameter during development from 0.66 to 1.40 mm *T. floridanus*
 Dactyli of fourth and fifth pereopods commonly armed with 3 (sometimes 2 or 4) spinules on inferior margin proximal to distal pair of spines; eggs not very large, increasing in major diameter during development from 0.36 to 0.73 mm *T. manningi*

1. Pleuron of fifth abdominal somite with sharp tooth near posteroventral angle (antennal spine present) 2
Pleuron of fifth abdominal somite with posteroventral margin entire, without projecting tooth 3
2. (1) Eye twice as wide as scaphocerite; third pereopod overreaching scaphocerite by length of dactylus and propodus only *P. fimbriata*
Eye less than one and one-half times as wide as scaphocerite; third pereopod overreaching scaphocerite by length of dactylus, propodus, and most of carpus *P. riveroi*
3. (1) Antennal spine lacking 4
Antennal spine present 5
4. (3) Ventral margin of rostrum only slightly concave in distal half; second pereopods unequal, right with 19-29 carpal segments, left with 13-15 *P. bermudensis*
Ventral margin of rostrum markedly concave in distal half; second pereopods equal, with 10-14 carpal segments *P. vicina*
5. (3) Second pereopods equal, with 10 carpal segments; merocarpal articulation of right not extending beyond scaphocerite *P. hemphilli*
Second pereopods very unequal, merocarpal articulation of right extending considerably beyond scaphocerite 6
6. (5) Posterior lobe of sixth abdominal somite, dorsal to uropodal articulation, armed with sharp tooth *P. profunda*
Posterior lobe of sixth abdominal somite unarmed *P. guyanae*

Family Glyphocrangonidae**Genus *Glyphocrangon* A. Milne Edwards, 1881**

Key to species

[Adapted from Holthuis, 1971]

1. Anterior antennal carina formed of a row of tubercles; first abdominal somite with two transverse rows of tubercles between intermediate carinae *G. spinicauda*
Anterior antennal carina absent; first abdominal somite usually with only single transverse row of tubercles, viz., along posterior margin 2
2. (1) Anterior intermediate carina not ending in spine; posterior antennal and posterior lateral carinae bearing several blunt tubercles or teeth; anterior of two teeth on anterior lateral carina behind pterygostomian spine reaching to or beyond orbital margin *G. longleyi*
Anterior intermediate carina ending in sharp spine; posterior antennal and posterior lateral carinae straight, without tubercles or teeth; anterior tooth of anterior lateral carina not reaching level of posterior margin of orbit *G. haematonotus*

1. Body depressed; telson broad and lanceolate or retangular, terminating in three or five spines of equal size (sometimes without terminal spinule); endopod of uropod with one median dorsal crest *Microprosthem semilaeve*
Body compressed; telson elongated, tip terminating in two strong spines, sometimes with small spinule between them; endopod of uropod with two dorsal crests, median crest strong and inner one weaker with several dorsal hairs 2
2. (1) Carapace and abdomen densely covered with uniformly distributed stout spines, sometimes arranged in longitudinal rows; spines hard and anteriorly directed; ischium of third maxilliped with outer spinules *Stenopus*
Abdomen without dorsal spines, sometimes with spinules near lateral margins of pleura; carapace with spines along posterior margin of cervical groove, often in parallel rows; spines erect, anteriorly directed, and pressed to surface of carapace; ischium of third maxilliped without outer spinules *Odontozona libertae*

Genus *Stenopus* Latreille, 1819

Key to species

[Adapted from Chace, 1972]

Rostrum unarmed ventrally; third abdominal somite without shield shaped boss; spines on terga of 3 posterior abdominal somites not arranged in transverse rows; scaphocerite unarmed laterally for considerable distance proximal to distolateral tooth and with 2 or 3 rows of spinules arising from dorsal surfaces .. *S. hispidus*

Rostrum armed ventrally with 6 to 8 spines; third abdominal somite bearing lobate, shield-shaped boss on posteromesial part; spines on 3 posterior abdominal terga arranged in transverse rows; scaphocerite armed throughout distal two-thirds of lateral margin and without spinules on dorsal surface *S. scutellatus*

Family Callianassidae

Key to genera and species

[Adapted from de Saint Laurent and Le Loeuff, 1979]

1. Dorsal surface of carapace with raised oval area; third maxilliped always lacking exopod or with exopod vestigial; uropodal exopod with antero-dorsal lobe; fifth pereopod chelate 2
- Dorsal surface of carapace without raised oval area; third maxilliped with or without exopod; fifth pereopod subchelate *Gourretia latispina*
2. (1) Propodus of fourth pereopod without disto-ventral prominence; pleopods 1 and 2 always reduced or absent in male; pleopods 3 to 5 with appendix interna projecting beyond mesial border of endopod; epipod of first maxilliped only slightly dilated ventrally *Callianassa*
Propodus of fourth pereopod almost always with disto-ventral prominence; pleopods 1 and 2 present in male; pleopods 3 to 5 with appendix interna recessed in endopod and not exceeding, or only slightly exceeding, mesial border; epipod of third maxilliped with acute anterior lobe; propodus of third maxilliped nearly always greatly dilated ventrally *Callichirus*

Genus *Callianassa* Leach, 1814

Key to species

[Adapted from Biffar, 1971a, with modification]

1. Front with lateral spinous projections..... 2
 Front lacking lateral spinous projections..... 5
2. (1) Third maxilliped lacking strong spinous crest on mesial surface of ischium, series of small separate denticles; rostrum short, 0.25-0.33 times length of eyestalks (posterior margin of telson concave) *C. guassutinga*
 Strong spinous crest present on third maxilliped; rostrum usually more than 0.33 times length of eyestalks (occasionally shorter in *C. rathbunae*) 3
3. (2) Endopod of uropod elongate oval, twice as long as wide; telson widest midlaterally, generally rounded in outline, posterior margin convex or straight (length of eyestalks only 1.2-1.7 times width) *C. acanthochirus*
 Endopod of uropod rhomboid or subtriangular; telson widest in anterior third, trapezoidal 4
4. (3) Posterior margin of telson with triangular median projection (rostrum almost as long as eyestalks; endopod of uropod subtriangular) *C. longiventris*
 Posterior margin of telson lacking median projection (pigmented area of eyestalk lateral, small, covering about 0.1 of exposed dorsal surface of eyestalk, mediadistal projection acute or rounded, curving laterally; upper exopodal plate almost as long as lower) *C. rathbunae*
5. (1) Rostrum triangular, rounded or acute, extending less than 0.25 length of eyestalks.. 6
 Rostrum elongate triangular, spinous or flattened dorsoventrally, acute, extending more than 0.25 length of eyestalks 10
6. (5) Antennular peduncle extending beyond tip of antennal peduncle..... 7
 Antennular peduncle not extending beyond tip of antennal peduncle..... 8
7. (6) Posterior border of telson straight, with acute median projection; distomedial projection of eyestalks elongate, slender, curving laterally; length of third antennular segment five times length of second segment *C. atlantica*
 Posterior border of telson concave; tip of eyestalks with short rounded projection; length of third antennular segment three times length of second segment *C. fragilis*

8. (6) Propodus of third maxilliped less than two times width of dactylus..... *C. quadracuta*

Propodus of third maxilliped about four times width of dactylus..... 9

9. (8) Lateral margin of telson trilobed..... *C. trilobata*

Lateral margin of telson more or less smoothly rounded (posterior margin of telson inconspicuously convex or concave; distal margin of endopod of uropod quadrate; propodus of third pereopod short, extending posteriorly only as far as margin of carpus, length 1.5 times width) *C. branneri*

10. (5) Antennular peduncle extending beyond tip of antennal peduncle... *C. jamaicense*

Antennular peduncle not extending beyond tip of antennal peduncle..... 11

11. (10) Ischium and merus of third maxilliped wide, combined length 1.1-1.4 times greatest width *C. biformis*

Ischium and merus of third maxilliped narrow, combined length more than 2.0 times greatest width *C. marginata*

Genus *Callichirus* Stimpson, 1866

Key to species [Adapted from Biffar, 1971a]

- Eyestalks shorter than first segment of antennular peduncle, terminating in short, subtriangular distal projections; telson widest midlaterally *C. major*

Eyestalks extending beyond first antennular segment, distomedial projection of eyestalks elongate, curving laterally; telson widest in posterior third *C. islagrande*

Key to large chelipeds of species of family Callianassidae (except for *C. biformis*)
[Adapted from Biffar, 1971a]

1. Superior and inferior margins of carpus ending distally in two acute prominences; superior margin of palm ending in acute prominence distally *C. quadracuta*

Carpus otherwise, no second prominence on superior and inferior margins, distal margins usually rounded; margin of palm rounded distally 2

2. (1) Ischium with midinferior projection, remainder of margin denticulate..... 3

Ischium lacking midinferior projection, inferior margin serrate, denticulate, spinous, or entire 4

3. (2) Projection on ischium denticulate, approximately as long as remainder of segment's width; inferior margin of merus inconspicuously serrate, without elongate projection *Callichirus islagrande* (male)
- Projection not denticulate, length approximately 0.2 times remainder of segment's width; merus with proximal inferior bifurcate projection, remainder of margin with several strong denticles *C. jamaicense*
4. (2) Ischium with distinct inferior spines..... 5
- Ischium lacking distinct inferior spines..... 8
5. (4) Merus and palm with two or three spines along superior margin
..... *C. acanthochirus*
- Merus and palm lacking superior spines..... 6
6. (5) Inferior margin of merus entire..... *C. marginata*
- Inferior margin of merus spinous or serrate..... 7
7. (6) Merus with 3-5 spines on proximal half of inferior margin, remainder of margin denticulate; ischium with numerous (7-9) spines on inferior margin; cutting edge of dactylus entire *C. longiventris*
- Merus with 7-12 spines plus acute serrations; ischium with 3-4 spines distally, acute serrations proximally; cutting edge of dactylus with median quadrate notch (male) or entire (female) *C. rathbunae*
8. (4) Inferior margin of merus entire..... 9
- Inferior margin of merus serrate, spinous, or with some sort of proximal inferior projection 10
9. (8) Propodal finger with acute triangular tooth proximally; carpus less than 1.7 times length of palm *Callichirus major* (female)
- Propodal finger serrate but lacking well-developed tooth; carpus more than 1.7 times length of palm *Callichirus islagrande* (female)
10. (8) Proximal inferior corner of merus with spinous or robust spine like projection..... 11
- Proximal inferior projection, if present, quadrate or forming hook, not spinelike.. 12
11. (10) Lateral surface of palm with 2-3 spines just proximal to base of propodal finger; projection on merus strong, bifurcate *C. guassutinga*
- Surface of palm lacking spines; distally curving spinous projection on merus, remainder of margin weakly serrate *Gourretia latispina*

12. (10) Merus with broad, well-developed, proximal inferior hook, distal margin of hook concave, tip acute or subacute, remainder of margin weakly serrate 13
Merus lacking hook, inferior margin serrate, spinous, or with quadrate proximal inferior projection 15
13. (12) Propodal notch extending proximally into palm; cutting edge of dactylus with three strong teeth; length of carpus less than 0.75 times length of palm
..... *C. fragilis* (male)
Propodal notch extending little or not at all into palm; dactylus lacking strong dentition; length of carpus greater than 0.75 times length of palm 14
14. (13) Proximal inferior margin of carpus broadly rounded, extending proximally beyond level of superior articulation with merus; cutting edge of propodal finger serrate; proximal superior margin of merus elevated, denticulate, margin more or less straight; total length of carpus, palm, and dactylus in adults less than 15 mm
..... *C. fragilis* (female)
Proximal inferior margin of carpus rounded, not extending proximally beyond level of articulation; propodal finger serrate in proximal third only; superior margin of merus rounded, highest centrally; total length of carpus, palm, and dactylus in adults more than 20 mm *C. atlantica*
15. (12) Merus with proximal inferior quadrate (may appear triangular) projection, inferior margin including projection serrate (carpus much --more than 1.25--longer than palm; propodal notch extending proximally into palm; dactylus hooked, with single rounded bifid tooth; propodal finger heavy, short, blunt at tip)
..... *Callichirus major* (male)
Merus without distinct projection, inferior margin either convex and serrate or forming serrate keel 16
16. (15) Carpus 0.33-0.67 times length of palm; palm subquadrate; dactylus heavy, with 2-3 strong teeth on cutting edge, acute at tip *C. branneri*
Carpus 0.65-0.95 times length of palm; palm distinctly longer than wide; dactylus with two truncate teeth medially (male) or lacking strong dentition (female)
..... *C. trilobata*

Key to genera and species
[Adapted from Manning, 1978]

1. Carapace much broader than long, its sides very thin and cut into very large, flattened, triangular projections *Parribacus antarcticus*
- Carapace usually longer than broad, its sides not very thin, either smooth or denticulate 2
2. (1) Front and usually lateral edges of antennae smooth or finely denticulate, not cut into large triangular projections; size large *Scyllarides*
Front and lateral edges of antennae cut into distinct teeth; size small..... *Scyllarus*

Genus *Scyllarides* Gill, 1898

Key to species
[Adapted from Lyons, 1970]

Gastric, cardiac, and branchial regions of carapace elevated, distinct; pregastric and gastric teeth prominent in profile; second through fourth abdominal somites with median, node-like carina *S. nodifer*

Gastric, cardiac, and branchial regions of carapace low, not strongly defined; pregastric and gastric teeth not obvious in profile; second through fourth abdominal somites low, rounded, without distinct carina *S. aequinoctialis*

Genus *Scyllarus* Fabricius, 1775

Key to species
[Adapted from Lyons, 1970]

1. Gastric and all lateral prominences on carapace sharp; second segment of antennular peduncle cylindrical; pleura of fourth abdominal somite sharply rectangular or acute laterally *S. depressus*

Prominences on carapace blunt; second segment of antennular peduncle flattened superiorly; pleura of fourth abdominal somite rounded laterally 2

2. (1) Pregastric tooth of carapace nearly always bilobed, incised; first to fourth abdominal somites with deep, narrow median notch in posterior margin *S. americanus*

Pregastric tooth of carapace rounded, entire; first to fourth abdominal somites with very shallow, broad median notch in posterior margin *S. chacei*
