FOREWORD

This checklist comprises a list of genera and species and their synonyms, arranged by tribe and subfamily, of the Tachinidae of America north of Mexico. The classification follows the catalogue by O'Hara and Wood (2004). As such, it incorporates all the nomenclatural changes published since the catalogue of Sabrosky and Arnaud (1965), most significantly those proposed by Herting (1984) and Wood (1985, 1987). The nomenclatural changes of Wood (1987) were republished in summary form, with additional changes, by O'Hara and Wood (1998). The present classification recognizes 303 genera and 1345 species of Tachinidae in America north of Mexico.

The catalogue by O'Hara and Wood (2004) has the same classification as the one here but includes species distributions, complete type information, annotated lists of relevant taxonomic and nomenclatural literature for tribes, genera and species, nearly 800 references, and an index to all names.

The following abbreviations are used for author names: A. & W., Aldrich & Webber; B. & B., Brauer & Bergenstamm; R.-D., Robineau-Desvoidy; S. & A., Sabrosky & Arnaud; S. & D., Sabrosky & DeLoach; T. & G., Toma & Guimarães; Tnsd., Townsend (in several places only to conserve space); Wulp, van der Wulp.

Other abbreviations used in the text: nom. dub., *nomen dubium*; nom. nud., *nomen nudum*. *Nomina nuda* and *nomina dubia* are cited in red in the text.
